AGROBIOMETRIX TECHNICAL DOSSIER 11

OCTOBER 2026 | PRODUCTION MASTER BLUEPRINT

AgroBiometrix 7-Module Architecture & Master Functional Blueprint

Production Specification

Updated Systems Reference: Multi-Agent Orchestration, Biometrical Breeding, Academic Proposal Studio, Agro-Ecosystems, Full-Spectrum Livestock Intelligence, Institutional Macro-Policy Simulator, and Universal Multi-Format Exporter (.pdf, .docx, .md)

Version: 2.1 (Institutional Production)

1. Executive Blueprint & Architectural Paradigm

AgroBiometrix is an enterprise-grade agricultural intelligence platform engineered to power scientific research, biometrical trials, and smallholder advisory across 48+ sub-Saharan African nations. The platform operates on an unconstrained **Dual-Core Architecture**:

- **Live Cloud AI Core**: Powered by Google Gemini (Gemini 1.5/2.0 Flash via modern v1beta endpoints), featuring automatic dynamic model discovery (ModelService.ListModels), 35-second failover safety, masked API key protection, and graceful offline DNS handling. Enables unconstrained generative reasoning, scientific document drafting, and cross-disciplinary multi-agent debate.
- **Offline African Agronomic Science Engine**: Operates 100% offline with zero cloud dependency and zero operational cost. Powered by calibrated deterministic biometrical models (DMRT, ANOVA, BLUP), FAO-calibrated edaphic profiles, institutional epidemiological matrices (NVRI Vom, ILRI, NAPRI), and verified literature reference repositories.
- **Universal Multi-Format Export Architecture**: Integrated cross-module document exporter (core/exporter.py) enabling instant download of official research dossiers, cabinet policy memos, and extension guides in **Publication-Grade PDF**, **Microsoft Word (.docx) with XML sanitization**, and **Markdown (.md)**.

The system reorganizes all specialized modules into **7 unified Power Suites**, maintaining their logical scientific order without arbitrary numbering, ensuring seamless navigation, anti-truncation dropdown aesthetics, and responsive multi-column layouts across desktop and mobile devices.

Suite Name & Focus	Sub-Components & Tabs	Primary Scientific Disciplines	Target Stakeholders
Multi-Agent Orchestrator	• 6 Autonomous Specialist Agents • Pan-African Context Layer • Dual-Core Live/Offline Engine	Cross-disciplinary agronomy, veterinary medicine, genetics, soil science, agricultural economics.	Research directors, extension managers, institutional consultants.
Agricultural Biometrics & Breeding Suite	• Tab 1: Experiment Designer • Tab 2: Biometrics & DMRT • Tab 3: Trait Selection & BLUP	Experimental design (RCBD, CRD, Split-Plot), biometrical ANOVA, DMRT step-down, quantitative genetics.	Plant/animal breeders, agronomists, field trial technicians, biometricians.
AI Research Scientist & Proposal Studio	• Tab 1: 7-Part Proposal Builder • Tab 2: PRISMA Systematic Review • Tab 3: Thesis Defense Mentor • Tab 4: Radio Advisory Extension • Multi-Format Exporter (.pdf, .docx, .md)	Grant proposal engineering, systematic review methodology, academic defense, rural extension.	BSc/MSc/PhD students, university faculty, CGIAR research scientists.
Agro-Ecosystems: Soil & Climate Intelligence	• Tab 1: Soil Fertility & Lime Simulator • Tab 2: Climate & Heat Resilience	Pedology, soil fertility, plant nutrition, agro-meteorology, climate resilience modeling.	Soil scientists, irrigation planners, climate adaptation officers.
Livestock & Veterinary Intelligence	• Bovine (Dairy & Beef Selection) • Poultry (Broiler & Layer Thermal) • Small Ruminants (Goat & Sheep) • Swine Production Simulator • Pearson Feed & Disease Matrices	Veterinary epidemiology, animal nutrition, livestock genetics, tropical thermal stress indices.	Veterinarians, livestock farm managers, feed mill formulators, animal scientists.
Agricultural Policy & Economic Simulator	• Tab 1: Fiscal Budget & 4 Ministries • Tab 2: 12-Commodity FX Substitution • Tab 3: Food Inflation & Shock Reserves • Tab 4: Cabinet Memo Generator (PDF/Docx/MD)	Macroeconomic policy, fiscal multipliers, foreign exchange substitution, food inflation CPI, CAADP.	Ministries of Agriculture, Finance, Labour, Poverty Alleviation, Central Banks, IFPRI.

Knowledge Graph & Developer API Hub	• Tab 1: Interactive Semantic Graph • Tab 2: Cloud AI API Management	Ontological engineering, semantic web, AI model deployment, REST API integration.	Data scientists, software developers, institutional IT administrators.

2. Suite-by-Suite Functional Blueprint & Scientific Specifications

Multi-Agent Orchestration Layer

Mission & Role: Central executive dispatch hub that decomposes complex, multi-domain agricultural questions and synthesizes coordinated assessments across 6 specialized autonomous agents.

- **Specialized Agent Roster**: (1) *Veterinary / Agronomy Specialist Agent*: Etiology, diagnostics, symptoms, vaccination protocols (NVRI Vom, ILRI); (2) *Genetics & Breeding Agent*: Cultivars, heritability, crossbreeding resilience; (3) *Climate & Agro-Ecosystems Agent*: Rainfall patterns, heat stress, agro-ecological suitability; (4) *Biosecurity & Pathology Agent*: Vector control, quarantine, prophylactic regimens; (5) *Agricultural Economics Agent*: Gross margins, input costs, local market prices in 48+ national currencies; (6) *Institutional Evidence Agent*: Citations to IITA, ILRI, FAO, KALRO, CSIR, and national breeding programs.
- **Dynamic Pan-African Regional Grounding**: Automatically detects target country or applies the active sidebar selection (e.g., Nigeria, Kenya, Ghana, Ethiopia, Côte d'Ivoire). Adapts commodity pricing, currency symbols (■, KSh, GH■, FCFA), and national research institutes.
- **Engine Failover & Diagnostic Ping**: Validates Google Gemini API keys via modern v1beta endpoints with dynamic model discovery. If key is missing, network is offline, or DNS lookup fails, falls back seamlessly to the calibrated Offline African Agronomic Science Engine with zero downtime.

Agricultural Biometrics & Breeding Suite

Mission & Role: End-to-end experimental laboratory uniting experimental field design, rigorous statistical mean separation, and quantitative breeding selection.

- **Tab 1 (Experiment Designer & Layouts)**: Supports Completely Randomized Design (CRD), Randomized Complete Block Design (RCBD), and Split-Plot Factorial designs. Computes plot randomization, generates unique plot identification codes (e.g., Plot 101, 102), and exports customized CSV field book templates with dynamic phenotypic response variables tailored to crops (yield, tuber count, brix) or livestock (live weight, ADG, FCR).
- **Tab 2 (Biometric Statistics & DMRT Engine)**: Ingests CSV field data or pre-loaded agronomic trials. Checks statistical assumptions (Shapiro-Wilk normality, Levene's homoscedasticity). Computes One-Way and Two-Way Factorial ANOVA with sum of squares, mean squares, F-statistics, and p-values. Executes Duncan's Multiple Range Test (DMRT) with harmonic mean adjustment for unequal replications and step-down studentized range critical values (r_p). Provides alternative tests: Tukey's HSD, Fisher's LSD, Dunnett's control test, and non-parametric Dunn-Bonferroni. Outputs publication-ready letter groupings (a, ab, b) and generates reproducible Python (scipy/statsmodels) and R (agricolae) scripts.
- **Tab 3 (Quantitative Breeding & Cultivar Selection)**: Pulls crop profiles across 48+ African crops (cereal, pulse, tuber, cash crop). Allows breeders to set economic trait weights (grain yield, stay-green, drought tolerance, striga resistance). Generates multi-trait radar charts, calculates Smith-Hazel selection index scores, and displays genotype-by-environment ($G \times E$) stability rankings.

AI Research Scientist & Proposal Studio

Mission & Role: Comprehensive academic workspace covering the complete lifecycle from systematic literature synthesis to publication-grade grant proposals, thesis defense mentorship, and smallholder farmer extension.

- **Tab 1 (Full Research Proposal Generator)**: Generates complete, 7-part publication-grade research proposals structured as: (1) Project Title, Executive Summary & Alignment; (2) Introduction, Problem Statement, Specific Objectives & Hypotheses; (3) Comprehensive Literature Review subdivided into 2.1 Theoretical Framework, 2.2 Molecular/Etiological Mechanisms, 2.3 Sub-Saharan African Empirical Evidence, and 2.4 Critical Gaps with 12+ real peer-reviewed citations; (4) Materials & Methods featuring Cochran's sample size formula ($n = \frac{Z^2 p q}{e^2}$), experimental designs, diagnostic protocols, and biometrical models; (5) Expected Outcomes & Impact; (6) Ethical Considerations; (7) 12-Month Work Plan; (8) Complete APA 7th Edition References with DOIs. Features 35s timeout resilience, dynamic Gemini model fallback, and key masking.
- **Tab 2 (PRISMA Systematic Literature Review)**: Simulates PRISMA 2020 four-stage screening (Identification, Screening, Eligibility, Included). Builds complex Boolean search strings, calculates exclusion attrition, and compiles structured Evidence Extraction Matrices (Study, Year, Country, Sample Size, Biometric Model, Key Finding, Evidence Grade) with 1-click CSV download.
- **Tab 3 (Thesis Mentor & Academic Defense Tutor)**: Socratic research advisor across 14 agricultural departments (Animal Nutrition, Plant Breeding, Soil Science, Agribusiness, Aquaculture). Provides thesis defense strategies, examiner Q&A; preparation, and explicit defense scripts (e.g., defending DMRT against external examiners questioning orthogonal polynomial contrasts).
- **Tab 4 (Evidence Matrix & Rural Vernacular Extension)**: Analyzes research gaps and translates scientific findings into authentic vernacular radio advisory scripts (Hausa, Yoruba, Igbo, Swahili, Amharic) for smallholder farmers, featuring an embedded acoustic marimba audio chime generator.
- **Universal Multi-Format Export**: Every generated document (Proposals, Systematic Reviews, Extension Scripts) is immediately exportable in **PDF**, **Word (.docx)**, and **Markdown (.md)** with full XML entity sanitization.

Agro-Ecosystems: Soil & Climate Intelligence

Mission & Role: Integrated physical environment modeling combining pedological soil chemistry with agro-meteorological climate resilience.

- **Tab 1 (Soil Fertility & Lime Simulator)**: Models USDA soil textural classes, cation exchange capacity (CEC), and active soil pH buffering. Simulates nitrogen (N), phosphorus (P), and potassium (K) dynamics, organic matter mineralization, and computes agricultural limestone ($CaCO_3$) requirements to remediate tropical acidic Ultisols/Oxisols.
- **Tab 2 (Climate Scenarios & Heat Stress)**: Maps agro-ecological zones (Sahel, Sudan Savanna, Guinea Savanna, Humid Forest). Models seasonal rainfall onset/cessation, drought return periods, diurnal temperature spikes ($>38^\circ C$), and crop thermal heat-stress vulnerability curves.

Livestock & Veterinary Intelligence (Full Multi-Species Engine)

Mission & Role: Specialized veterinary, genomic, and nutritional intelligence across all major commercial and smallholder livestock species in tropical agro-ecologies.

- **Bovine & Pastoral Intelligence**: Indigenous Zebu (White Fulani, Sokoto Gudali, Bunaji) and Taurine (N'Dama, Muturu) heat stress thresholds (THI > 78), SLICK coat hair locus, BTA trypanotolerance sweeps, composite dairy/beef selection indices, and 60-day festive bull fattening financial calculators.
- **Poultry & Avian Systems**: Broiler (Ross 308, Cobb 500) and layer (Isa Brown, ShikaBrown) thermal panting calculators, respiratory alkalosis electrolyte therapy (potassium chloride / sodium bicarbonate), Newcastle Disease (ND Lasota) and Infectious Bursal Disease (Gumboro) vaccination calendars.
- **Small Ruminants (Goats & Sheep) Interactive Simulator**: Fully calibrated interactive parameter controls for Sahelian, Red Sokoto (Maradi), and West African Dwarf (WAD) goats, alongside Yankasa and Balami sheep. Interactive live weight (15–60 kg), Average Daily Gain (ADG: 50–250 g/day), intensive festive ram fattening models (>50% margin), Pearson square balanced feed formulation with local browse legumes (*Leucaena*, *Gliricidia*), and diagnostic matrix for Peste des Petits Ruminants (PPR) and CCPP.
- **Commercial Swine Production Simulator**: Interactive breed controls (Large White, Landrace, Indigenous Black Pig), live weight (20–120 kg), ADG (300–850 g/day), evaporative wallow & sprinkler heat dissipation guidelines (zero sweat glands), Pearson square finisher feed balancing (cassava peel meal, brewers dried grains), and stringent African Swine Fever (ASF) biosecurity quarantine protocols.

Agricultural Policy & Economic Simulator (Institutional Macro-Policy Platform)

Mission & Role: Institutional macroeconomic decision platform designed for sovereign ministries (Agriculture, Finance, Labour, Humanitarian Affairs & Poverty Alleviation, Central Banks, and multilateral donors) to model public budget allocations, trade policy, and food security.

- **Tab 1 (Fiscal Budget Allocation & Inter-Ministerial Impact)**: Dynamic capital envelope slider (■5B–■250B / regional currency equivalent) distributed across 5 strategic public pillars: (1) Smart e-vouchers & stoichiometric nutrients, (2) Solar micro-irrigation & water basins, (3) Post-harvest hermetic storage & cold hubs, (4) Livestock genetics & NVRI vaccine hubs, (5) Concessionary ag-credit guarantees. Generates 4 institutional ministerial scorecards: **Ministry of Finance / Treasury** (GDP multiplier 2.85×, Ag-GDP addition, Benefit-Cost Ratio BCR, fiscal breakeven); **Ministry of Labour & Productivity** (on-farm formal jobs, downstream processing/logistics livelihoods, youth & female quotas); **Humanitarian Affairs & Poverty Alleviation** (rural households lifted above $2.15/day PPP poverty line, caloric deficit reduction, stunting mitigation); **Central Bank & Trade** (net FX saved, food import substitution rate, food CPI cooling). Includes Plotly fiscal commitment vs. output visualizations.
- **Tab 2 (Strategic Commodity Portfolio & Import Substitution)**: 12 strategic value chains (Irrigated Wheat, Parboiled Rice, White/Yellow Maize, Sorghum/Millet, Industrial Cassava Starch/HQCF, Ware Yam, Soybean, Biofortified Cowpea, Broilers, Table Eggs, Tilapia/Catfish Aquaculture, Export Cocoa). Features targeted expansion sliders (+10% to +100%), policy levers (guaranteed floor prices, tariffs, seed subsidies), land/water resource footprint calculators, Net FX saved ($ USD & local currency), and a real-time **National Self-Sufficiency Progress Gauge**.
- **Tab 3 (Food Inflation & Macro-Shock Resilience Simulator)**: Tests 4 severe geopolitical/climate stress tests: 45% Global Fertilizer Spike (Black Sea disruption), Severe Drought / El Niño Anomaly (-35% rainfed yield loss), 40% Currency Devaluation (import parity cost surge), and Cross-Border Insecurity & Supply Chain Shocks. Simulates counter-cyclical government interventions: Strategic Grain Reserve (SGR) releases (0–500,000 MT), targeted digital food e-vouchers (0–2,000,000 households), and emergency zero-tariff food corridors. Renders an interactive **12-Month Food CPI Inflation Trajectory Curve** comparing baseline vs unmitigated shock vs policy response.
- **Tab 4 (Federal Executive Council Cabinet Policy Memorandum Generator)**: Synthesizes publication-grade Cabinet Policy Memoranda conforming to AU CAADP and ministerial standards, complete with official reference numbers, background, inter-ministerial KPI matrices, stress test profiles, and statutory prayers for council approval. Instant multi-format export in **PDF**, **Word (.docx)**, and **Markdown (.md)**.

Knowledge Graph & Developer API Hub

Mission & Role: Foundational data graph infrastructure and developer integration gateway.

- **Tab 1 (Interactive Knowledge Graph)**: Renders a multi-relational network graph connecting crop cultivars, pathogens, soil types, pest vectors, candidate genes, and CGIAR/NARS research institutes. Enables users to visually traverse complex biological relationships.
- **Tab 2 (Developer API Hub & Diagnostics)**: Manages API subscriptions (Google Gemini, OpenAI, Groq), displays live server ping status, measures token latency, and provides REST API endpoint code snippets (cURL, Python, JavaScript) for external institutional integration.

Universal Multi-Format Export & UI/UX Accessibility Architecture

Architectural Directive: Enterprise adoption by government agencies and academic institutions requires that all outputs move effortlessly into executive decision workflows without manual reformatting:

- **Multi-Format Exporter (core/exporter.py)**: Automatically translates analytical outputs into three distinct document standards: (1) *Executive PDF* generated via ReportLab with running two-pass headers/footers and official green branding; (2) *Microsoft Word (.docx)* with XML control character sanitization (regex-cleaning ASCII 0x00–0x1F) to prevent document corruption, custom heading hierarchies, and styled tabular layouts; (3) *Clean Markdown (.md)* for rapid note ingestion into Notion, Obsidian, and institutional wikis.
- **UI/UX Layout & Anti-Clipping Form Aesthetics**: Strict enforcement of clean, uncluttered Streamlit forms. All dropdown option labels are engineered to prevent horizontal truncation across varied display resolutions. Complex input parameter panels are laid out in responsive 2-column or 3-column grids, maintaining consistent visual hierarchy and zero screen crowding.

3. Technical Verification & Zero-Loss Compliance

To ensure uncompromising scientific accuracy and institutional reliability, all platform upgrades operate under certified compliance criteria:

1. **Zero Algorithm Tampering**: Every biometric and econometric formula—including DMRT studentized ranges, ANOVA sum of squares, Cochran's sample size, Pearson Square feed balancing, and macro-fiscal multipliers—remains mathematically certified and reproducible.
2. **Preserved Session State & Multi-Currency Engine**: Dynamic currency resolution automatically scales monetary indicators across ■, KSh, GH■, FCFA, and US$ based on the user's active geographic region without losing in-memory user inputs.
3. **100% Offline Operational Integrity**: When cloud connectivity or external API keys are unavailable, all 7 suites execute smoothly using calibrated offline models with zero application crashes.
4. **Export Sanitization Compliance**: Word (.docx) documents undergo mandatory XML regex filtering, eliminating XML parsing errors when opened in desktop Microsoft Word or Google Docs.
