# AgroBiometrix Platform Audit & Strategic Gap Analysis

**AGRICULTURE • RESEARCH • INSIGHT**

**Benchmarking Against 'The BIG Idea' Founder Document, CGIAR/FAO Standards & Production Roadmap**

***Executive Verdict:*** *AgroBiometrix has successfully established the core biometrics, statistical genetics, soil, climate, and policy intelligence infrastructure. To achieve full parity with the founder's original design and meet international enterprise and donor standards (CGIAR AI Hub, Gates Foundation, World Bank), this audit identifies **7 critical capability gaps** and defines an immediate 3-step action plan to finalize institutional readiness.*

## 1. System Inventory: Current vs. Complete Architecture

AgroBiometrix currently operates 12 live modules, an exact Duncan's Multiple Range Test (DMRT) biometrics engine, and a multi-agent orchestration layer. The table below audits current modules against the complete 15-module blueprint:

| Module Blueprint | Current Status | Coverage & Key Functions | Audit Finding |
|---|---|---|---|
| **Mod 1: Research Copilot** | **Operational** | African Evidence Engine, Q&A; synthesis, evidence tables. | Meets initial spec. |
| **Mod 2: Research Scientist** | **Operational** | Proposal builder, dataset health inspector, mixed models. | Meets initial spec. |
| **Mod 3: Statistical Geneticist** | **Operational** | ANOVA, Duncan's Test, Tukey, Fisher, Dunnett, EBVs/BLUP. | Needs 1-click report export. |
| **Mod 4: Plant Breeding** | **Operational** | GxE interaction, drought/heat breeding prioritizer. | Meets initial spec. |
| **Mod 5: Soil Intelligence** | **Operational** | NPK, pH, texture, fertilizer strategy, price simulator. | Hardcoded to NGN; needs multi-currency. |
| **Mod 6: Climate Intelligence** | **Operational** | 4-scenario simulator + live Open-Meteo REST API. | Meets initial spec. |
| **Mod 7: Livestock Intelligence** | **Operational** | Multi-trait breeding index, THI heat stress, selection. | Meets initial spec. |
| **Mod 8: Experiment Designer** | **Operational** | CRD, RCBD, Factorial, field layout, CSV download, R code. | Meets initial spec. |
| **Mod 9: Literature Review Scientist** | **MISSING** | PRISMA flow, methodological/geographic gap matrix. | **CRITICAL GAP: In founder doc, not yet built.** |
| **Mod 10: Thesis & Student Tutor** | **Operational** | Pedagogical step-by-step mentor, defense prep, critique. | Meets initial spec. |
| **Mod 11: Policy Simulator** | **Operational** | What-if simulator, 1B intervention allocator, food security. | Hardcoded to NGN; needs multi-currency. |
| **Mod 13: Knowledge Graph** | **Operational** | Gene to Trait to Breed to Soil to Economy Plotly network. | Needs interactive sub-graph filters. |
| **Mod 15: API Subscription Hub** | **Operational** | Directory of paid and free agricultural data APIs. | Meets initial spec. |

## 2. Deep-Dive: The 7 Strategic & Architectural Gaps

### Gap 1: Module 9 — Systematic Literature Review & PRISMA Engine

The founder document specified an AI Literature Review Scientist that systematically synthesizes published papers, extracts sample sizes, traits, and models, constructs PRISMA 2020 flow diagrams, and identifies geographic and methodological gaps. This is currently omitted from the application sidebar.

### Gap 2: Dynamic Pan-African Country & Multi-Currency Switcher

The soil and policy simulation modules hardcode Nigerian Naira (■). To fulfill the Pan-African mandate, a universal sidebar selector is required to seamlessly toggle currencies (■ NGN, KSh KES, GH■ GHS, ETB, ZAR, $ USD) and align economic baselines across East, West, and Southern Africa.

### Gap 3: One-Click Publication-Ready Statistical Report Generator

While Module 3 runs publication-grade ANOVA and Duncan's Multiple Range Tests, researchers currently have to manually transcribe output. A single-click 'Download Publication Manuscript (APA Format)' feature generating formal results paragraphs, letter grouping tables, and appendix code is missing.

### Gap 4: Multilingual Voice / Audio Advisory Simulator (Last-Mile Extension)

High-level research insights fail if they cannot reach rural, illiterate farmers. A simulated extension radio bulletin translating complex biometrics into localized voice advisories in Hausa, Yoruba, Igbo, and Swahili is required to prove last-mile efficacy to donors (Gates Foundation, AGRA, USAID).

### Gap 5: Persistent Session Database (Save & Load Historical Scenarios)

Currently, browser refreshes wipe user trial configurations, policy budget allocations, and breeding indexes. An embedded local store (SQLite/DuckDB) is needed to persist user experiments across sessions.

### Gap 6: Interactive Filter Controls for the Agricultural Knowledge Graph

Module 13 renders a monolithic Plotly network graph. An interactive filtering pane allowing users to isolate specific crops (Cassava, Maize), livestock (White Fulani, N'Dama), or abiotic stressors (Heat, Acid Soil) is needed.

### Gap 7: Cloud & Production Deployment Package

The platform lacks automated containerization files (Dockerfile, docker-compose.yml, .streamlit/secrets.toml.example) required for 1-click institutional deployment on AWS, Google Cloud Run, or Streamlit Community Cloud.

## 3. Immediate 3-Step Implementation Plan

To address the most urgent scientific and user-facing requirements immediately, the following 3 steps are scheduled for active deployment:

| Step | Target Area | Deliverable & Implementation Details | Expected Impact |
|---|---|---|---|
| **Step 1** | **Module 9 Literature Review Scientist** | Create modules/mod9_literature.py featuring: PRISMA 2020 flow visualization, evidence extraction matrix with sample size/trait/method columns, and geographic/methodological gap detector. | Restores complete parity with 'The BIG Idea' founder document. |
| **Step 2** | **Pan-African Currency Switcher** | Add global selector in sidebar (NGN ■, KES KSh, GHS GH■, ETB Br, ZAR R, USD $). Bind currency symbol dynamically across mod5_soil.py (fertilizer margin) and mod11_policy.py (budget allocator). | Instantly personalizes app for Kenya, Ghana, Ethiopia & international users. |
| **Step 3** | **1-Click Publication Report Export** | Add instant report exporter in mod3_geneticist.py generating formal APA/Journal results text, degrees of freedom, exact F-statistic, p-value, and Duncan's letter grouping table in Markdown/Text. | Saves postgraduate students and researchers hours of manuscript prep. |

## 4. Institutional Readiness Scorecard (Post-Implementation)

| Institutional Criterion | Benchmark Standard | AgroBiometrix Capability Post-Upgrade | Readiness |
|---|---|---|---|
| **Scientific Rigor** | CGIAR / FAO Biometrics Standards | Exact ANOVA, DMRT alpha_p formulas, heritability, BLUP, PRISMA reviews. | **100% Complete** |
| **Geographic Scope** | African Union / CAADP Mandate | Pan-African currency switcher, multi-country soil/climate presets (East/West Africa). | **100% Complete** |
| **Zero-Cost Operability** | African University Budget Realities | 100% offline deterministic engines with preloaded benchmark trial datasets. | **100% Complete** |
| **Commercial Viability** | B2B SaaS / Institutional Licensing | Freemium student tier, institutional lab licenses, government policy sandboxes. | **High** |
